

Will the Computer Eat Your Vote?

Do you trust your vote to a machine that can't print a paper record for you to verify?

When you vote, the machine should print a record of how you voted. Then you review the paper, and deposit that record into a ballot box for audits and recounts. Just in case the machine breaks down.

In May some machines did break down. Some of the machines ran illegal software and the county didn't know until citizens told them. They say that nothing went wrong but they can't prove that.

The politicians are not protecting our votes.

They expect us to let out of state companies tell us who won and who lost without any proof other than the bits and bytes inside the machine. Bits and bytes that can be changed by a single error or a simple hack.

They are not protecting our democracy.

It's simple. When we vote on electronic machines, we still need paper to be sure the votes count.

What can you do? Contact VotePA for details about the issue. Our democracy is too important to leave up to private companies and politicians; it is up to us!

www.VotePA.us 412-271-5459

Help us work for fair, accurate, and recountable elections.
